# **ABSTRACT**

# School of Computer Science and Informatics University College Dublin

This is the Final Project Report submitted for the Software Engineering Project I by team **6droids.** 

- "FormCalc" is a software calculator which is implemented as a Computer Program, not as a physical hardware device. "FormCalc" is different from the standard calculators. It is different because, user doesn't have to enter keys or commands each and every step in order to get the end result. It's a symbolic calculator allows user to enter the formula in symbolic forms to generate/obtain the end result at once.
- "FormCalc" in other words, reflects a combination of a standard calculator app and a mathematical software package in your desktop.
- Special features
  - Differentiation calculator
  - Integral calculator
  - Graphs creator
  - Save and reload formulas / equations
  - Quick access history recorder

# 1.0 Project Specifications

# 1.1 Requirements

#### 1.1.1 Programming Language (C++)

C++ is a middle-level programming language developed by Bjarne Stroustrup starting in 1979 at Bell Labs. C++ runs on a variety of platforms, such as Windows, Mac OS, and the various versions of UNIX.

C++ is a general-purpose programming language. It has imperative, object-oriented and generic programming features, while also providing the facilities for low-level memory manipulation.

# 1.1.2 IDE (QT Creator)

QT provides a large set of libraries as well as the GUI related things (ex XML parsing, threads, networking), all in a consistent style and all multi-platform. This means we rarely need to use other libraries, though we do use boost for some things.

#### 1.2 Functionalities

#### A. User Communication Interface

The user has a provision of communicate with "FormCalc" by using text window. The user can enter formulae, evaluate formulae, request a graph of a formulae, etc. The text interface scrolls, to show previous commands that were entered.

User can use a graphical interface too. With buttons and read-out strip user may interact with "FormCalc" to enter expressions to be evaluated or graphed.

#### B. Formula entry and storage

A User can enter a formula through the text user interface and a given name to that formula. The stored expressions can be used in the recent future. If the given name of a formula already exists; "FormCalc" will ask whether the application should over-write the existing formula and associate it with the new formula.

#### C. Formula Re-use

The user is allowed to use a formula that has been introduced before as a function in another formula. The new formula should be introduced with a different name.

#### **D.** Formula Evaluation

#### E. Formula Integration

"FormCalc" can calculate the integral of any formula f() using numerical method. The integral function of a formula is indicated by the name of the formula in uppercase. That means the integral function of f() is F().

#### F. Formula Graphing

#### G. Graphing Multiple Formula Simultaneously

#### H. Saving Formulae to a File

The user is allowed to save memory of the formulae to a disk file (.xml file) by selecting save button in the graphical user interface or typing save in text interface. A file browser window will open in either case, allowing the user to specify a filename into which the formulae should be saved.

#### I. Re-Loading Formulae From a File

#### J. Saving a Graph to a File

#### K. Find Area Under Curve

### 1.3 Work – Package Overview

When implementing "FormCalc" software below mentioned main tasks were identified where they were further divided into multiple tasks.

#### 1. Requirement Analysis

- Work Breakdown structure
- Project Sprint
- Developing Plan

#### 2. UI, UX and Prototyping

- Wireframes
- High Fidelity
- UX & UI Review1

#### 3. Architecture

- Flow Charts
- High Level Architecture
- UI Designing
- QA Release v0.0.1

#### 4. Development

- Basic Math Functions
- History Implementation
- Formula Storage
- Formula Evaluation
- Formula Integration
- Formula Graphing
- Multiple Formula Graphing
- File Handling
- Bug Resolving

#### 5. Quality Assurance

- Create Test Scenario
- Unit Testing
- Component Testing
- Integration Testing
- User Testing

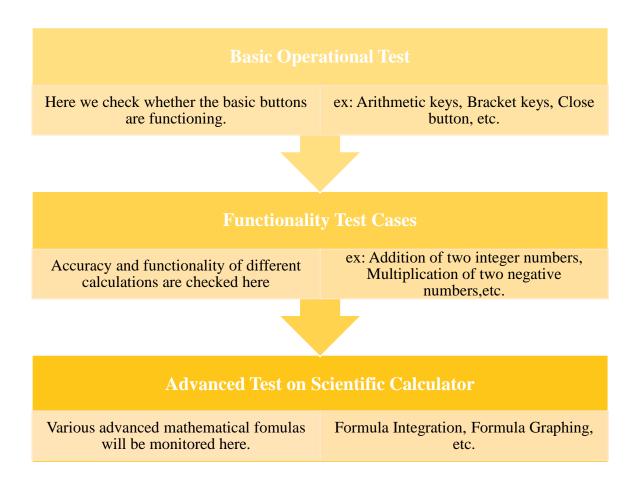

#### 6. Documentation

- Daily Scrum Notes
- Weekly Report
- Interim Report
- Final Report

#### 7. Deployment

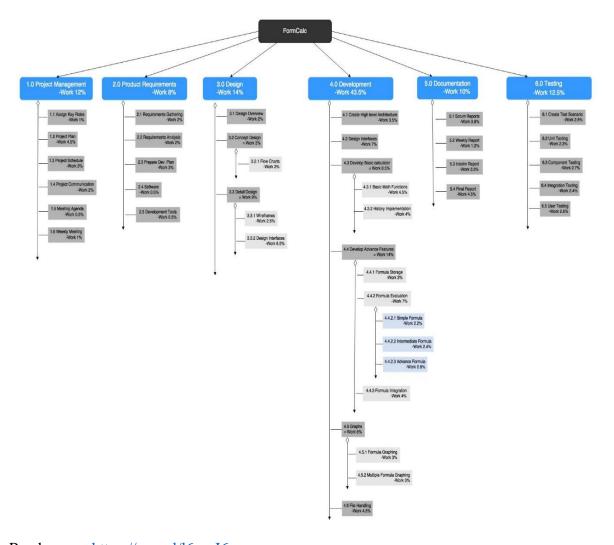

# 1.4 Test Reports and Test Cases

Testing of the "FormCalc" will be carried out in three stages as follows. Further relevant test scenarios for each stage will be carried out.

Read more - <a href="https://goo.gl/aw6ZJr">https://goo.gl/aw6ZJr</a>

# 1.5 Work Breakdown Structure

Read more - <a href="https://goo.gl/l6xmJ6">https://goo.gl/l6xmJ6</a>

# 2.0 Software Implementation

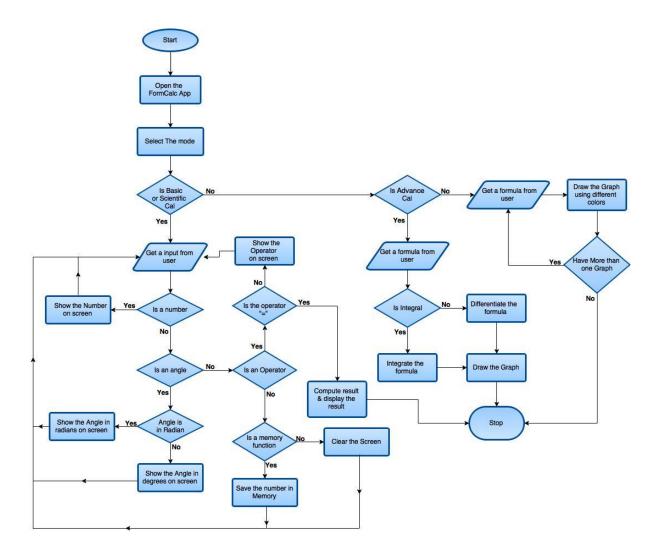

To make things easier, we divided the complete project into smaller divisions, so each member can take over one part and work on that. As we suggested, following divisions are created. We call it 3D structure.

- Designing team (Wireframes, UI)
- Dev team (Flowcharts, Development)
- Documentation, Testing and QA team (Reports, QA)

So these are the tasks which these teams must achieve by end of the project.

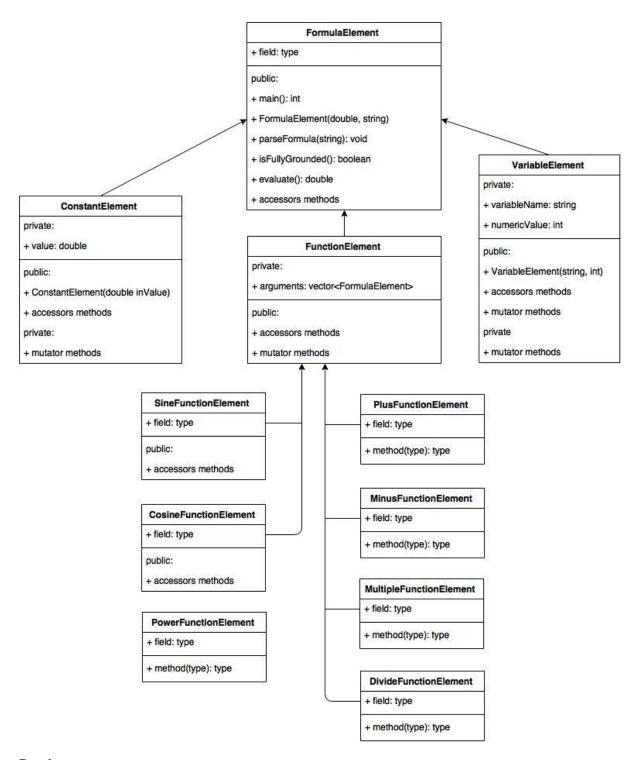

- Research and Development
- Requirement Analysis
- UI,UX and Prototyping
- Architecture
- Development
- Quality Assurance
- Documentation
- Deployment

# 2.1 Flowchart Diagram

# 2.2 Class Diagram

Read more - https://goo.gl/5OTS14

# 2.3 Wireframes

Read more - https://goo.gl/op10hY

# 2.4 User Interface

2.4.1 Splash Screen

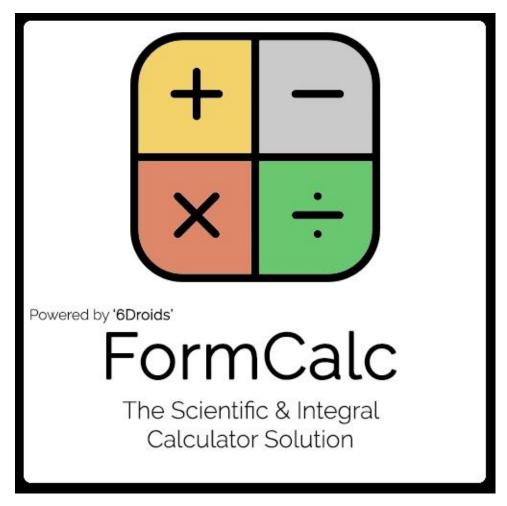

Figure 1 - Splash Screen

#### 2.4.2 Basic Calculator

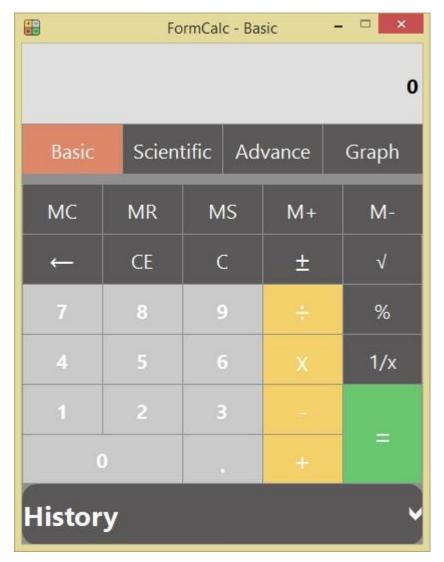

Figure 2 - Basic Calculator

This is the main window of "FormCalc" Calculator solution. This will help the user to solve basic mathematical equations.

And as additional features, once a user start using the "FormCalc" it will record every equation and formula done by the user in a single instance and if the user wants to review a previous equation, the user can simply check it by clicking on the **HISTORY** dropdown menu.

As for few other functionalities, this interface will allow the user to switch between other interfaces and also save and reload mathematical functions.

#### 2.4.3 Scientific Calculator

Figure 3 - Scientific Calculator

Using this window, user can solve basic mathematical equations and formulas. As for an example user can use this window to solve equations such as  $x^2+5x+6=0$  by passing variables or can solve trigonometric formulas as well. This window is also has the ability to use the **HISTORY** function, save and reload feature and switch between windows features.

#### 2.4.4 Advance Calculator

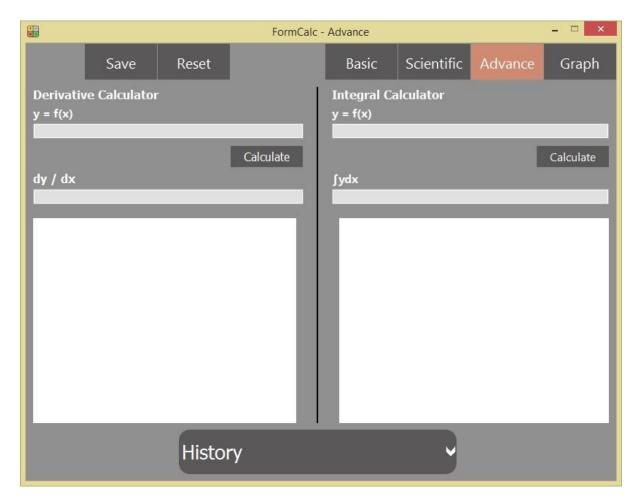

Figure 4 - Advance Calculator

Using the **Advance Calculator**, user can solve **Integration and derivation formulas**. This is one of the key features of the "FormCalc". This will not only solve the given formula, it will print the graph of the given formula in the given space.

All you have to do is if it's an integration formula, insert the formula in to the first text field of that area and hit calculate. It's same to the derivative formulas as well.

This window also supports all those features such as use of the **HISTORY** tab, save and reload and move between windows.

### 2.4.5 Graph Calculator

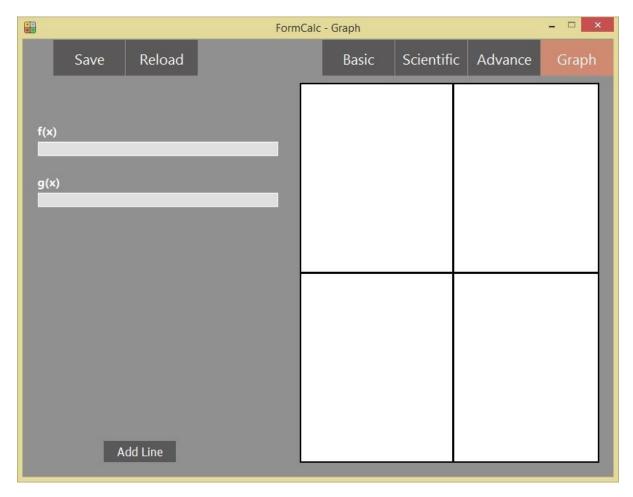

Figure 5 - Graph Calculator

This is the Graph view of the "FormCalc". Using this, user can insert any equation such as  $f(x) = \sin x$  then the program will automatically draw the respective graph to that. And also if the user wants to compare 2 graphs such as  $f(x) = \sin x$  and  $g(x) = \cos x$ , the program will draw both graphs in the same interface, so the user can compare both.

And if the user wants to add more line and compare more graphs, he can easily do that by using add line function.

# 3.0 Analysis of Success / Failure

From the day one we worked hard on our project. Sailed through so many difficult tasks and with dedication, team spirit we managed to overcome all barriers, difficulties to make it a success. Even though there were few short comings we made it a success.

#### Successes

• Requirement 01:

User Interface Text User Interface Graphical "Calculator-Style" User Interface

• Requirement 02:

Formula Entry and Storage

• Requirement 03:

Formula Re-Use

Requirement 04:

Saving Formulae to a File

• Requirement 05:

Re-Loading Formulae from a File

#### **Failures**

- It takes considerable time to develop test cases when testing software by using "Automation". On this stage spending on that is a risk.
- As another feature we tried to add a "Currency Converter" to the "FormCalc", but we failed due to time barriers.
- One of our main design concepts was to make the User Interface window layout
  expands or shrinks according to the designated button that clicks to view or hide
  buttons of the calculator. As an example when the "FormCalc" changes its layout
  from Basic Calculator to Scientific Calculator it expands and unhide buttons of the
  Scientific Calculator. But we couldn't achieve it as it opens a new layout to do so.

### 4.0 Additional Features

We thought of developing "FormCalc" by adding some features where it becomes more attractive and user friendly.

# • "Flat Design" User Interface

"Flat Design" is a style of interface design that is focus on minimal use of simple elements and flat colors. It gives better and smart look for the "FormCalc" than a normal User Interface design.

Few advantages of using Flat Design.

- o Flat Design is the Perfect Style for Great UX
- o Flat Design is Endlessly Adaptable

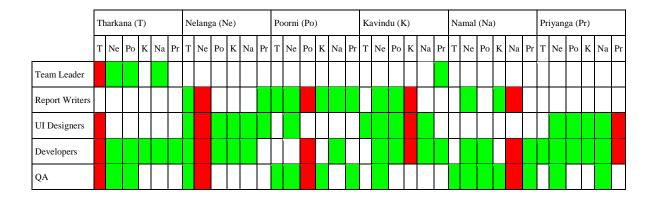

### • History

Another feature is all calculations done by user saved in the history, but erases once the "FormCalc" is closed.

# 5.0 Team Analysis

### **5.1 Team Roles**

First thing we did in the project was delegating roles between team members. So we created a spreadsheet in Google Drive to vote team members for their expertise. We voted team members for their areas of expertise and at the same time vote ourselves for our strong areas. Through that we selected the best for their strengths accordingly.

Task	Assigned Persons	Follow up
Team Leader	Tharkana	
Report Writers	Poorni / Namal	Kavindu
UI Designers	Nelanga / Kavindu	Team
Developers	Tharkana / Priyanga / Kavindu / Nelanga	
QA	Poorni / Namal	Team

Dev Team	Tharkana, Priyanga, Kavindu, Nelanga
Designing Team	Nelanga, Kavindu
Documentation Team (Reporting, QA)	Poorni, Namal

# **5.2 Project Sprint**

This is the Project Sprint we are following at the moment to keep track of the project.

# **6.0 Conclusion**

Past few couple of weeks had been a very busy period for us. From the day one we started the project it became harder by day. With some of our team members work schedules we had a tough time for the project.

We've been a great team till this moment we present our project. That's why we could make it a success even though we had some few barriers and short comings.

We had to learn so many new things when we were doing the project.

With all the lessons learnt through mistakes, challenges and specially with a great team spirit finally we made it a success.
